Open the folder latex_lab from https://drive.google.com/drive/folders/1CLMU09Sroh_fas1n7q92Ag8aRVkSxPgX?usp=drive_link

In the folder, there are 24 papers named as paperx.pdf [x is from 1 to 24]

In this assignment you will have to reproduce the paperx.pdf assigned to you by writing the same in the .tex file format and compiling the output pdf .

How to know which paper is assigned to you for this lab ? -- Your roll no is of the format cs24mtxxx. For eg. If xxx is say 008 then paper8.pdf is the paper assigned to you for this lab.

There is a folder named class_templates which contains the sample class file templates. To know which template you have to use, read the README document provided in class_templates folder.

Submission Instructions:

You need to create a separate branch named lab4 in your main github repo and push the .tex file sources, figs and any other related files, output pdf named as paperx_output.pdf (where x is the paper assigned to you)

Deadline: 28th August 11.59PM
